TWISTER and STORM - ELECTROPNEUMATIC HORN

The compressor and the horns must be fixed to a flat, rigid surface (possibly metal) using the special brackets and screws supplied.

The horn must be installed in a position protected from:

- prays of water generated by the movement of the vehicle or by washing systems.
- foreign bodies such as stones, insects, mud, snow, etc.
- excessive heat sources (above 80°) such as radiators, exhaust pipes, engines.

ATTENTION!

It is recommended to install the horn with the electrical connection of the compressor pointing downwards.
